

CYBER CAPABILITIES

CYBER INSURANCE

Cyber insurance is finding its way onto the agendas of businesses everywhere, but it's still a relatively misunderstood class of insurance. Cyber risk is an exposure that no modern business can escape, and the financial impact of cybercrime, business interruption, and privacy events are now felt within all industries.

Cyber insurance is necessary because traditional insurance policies were not designed to handle 21st century threats. Many standard first party insurance policies such as property and traditional crime were designed to deal with threats to a company's physical assets – their buildings, machinery, office equipment and tangible money only. However, most businesses these days now have a much greater reliance on their digital assets than they do on their physical ones, which makes a new kind of policy essential.
